THE IMAGE OF INNOVATION™

Course objectives

MRI is now the preferred imaging modality in human medicine, and is becoming so in veterinary medicine, especially in neurological and orthopedic fields due to the superior outcomes in soft tissue visualization. This year "MRI in Veterinary medicine" provide the participants with the basics on MRI technique and suggest correct guidelines for the diagnosis of pathologies using both MRI and CT, in major clinical applications.

The course will feature an extensive scientific program and an image interpretation session based on clinical cases from daily use in referral practices.
